No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 2, A

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A32164
biliary glycoprotein 1 precursor, splice form a - human
NyAlternate names: transmembrane carcinoembryonic antigen 1 (TM1-CEA); transmembrane can
NyAlternate names: transmembrane carcinoembryonic antigen 1 (TM1-CEA); transmembrane can
NyContains: biliary glycoprotein 1, splice form b; biliary glycoprotein 1, splice form :
C;Species: Homo sapiens (man)
C;Species: Homo sapiens (man)
C;Accession: A32164; A30127; B30127; A48078; S45664; S65939; A30847; G44476

Note=No experimental confirmation available;
Note=No experimental confirmation available;
Name=3; Synonyms=19A24, CS1-5;
Isola=QSNQ25-3; Sequence=VSP_013782;
TISSUE SPECIFICITY: Expressed in spleen, lymph node, peripheral blood leukccytes, bone marrow, small intestine, stomach, appendix, lung and trachea. Expression was detected in NK cells, activated B-cells, NK-cell line but not in promyelocytic, B-, or T-cell lines. The isoform 3 is expressed at much lower level tha isoform
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   -!- CAUTION: Ref.3 (CAB76561) sequence differs from that shown due to

Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

-!- FUNCTION: Mediates NK cell activation through a SAP-independent extracellular signal-regulated ERK-mediated pathway. May play a role in lymphocyte adhesion (By similarity). Isoform 1 does not bind SAP (in vitro).

-!- SUBCELLULAR LOCATION: Membrane; single-pass type I membrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SIMILARITY: Contains 1 Ig-like C2-type (immunoglobulin-like)
